

JOHN GACHERU

QA Automation Engineer | Playwright | Cypress | Postman | JavaScript | Python | CI/CD
Louisville, KY | (502) 701-0693 | gacheru.kabiru@gmail.com | linkedin.com/in/john-gacheru | github.com/Dev0071

PROFESSIONAL SUMMARY

I am a QA/QE Automation Engineer with 3 years of experience building test automation frameworks using Playwright, Cypress and Selenium. Comfortable with API testing in Postman, backend data validation in SQL and integrating test suites into CI/CD pipelines using JavaScript and Python. At Griffin Global Technologies, served as QA Lead and Scrum Master for a team of 2 QA engineers and 5 developers, owning quality strategy for financial applications at Howard Capital Management. Also built BugLens, a production AI platform in Python and FastAPI that uses the Claude API for automated root cause analysis on software errors. Currently pursuing an M.S. in Computer Science at the University of Louisville. Certified Scrum Master. Eligible to work in the USA long term without sponsorship.

TECHNICAL SKILLS

- **Test Automation:** Playwright, Cypress, Selenium WebDriver. Frameworks: Page Object Model, Data Driven Testing, Reusable Component Architecture.
- **API Testing:** Postman for REST API testing, request and response validation, authentication flows and error condition testing.
- **Languages:** JavaScript ES6, Python, SQL. Backend: FastAPI, Node.js. Frontend: Next.js, React, TypeScript, Tailwind CSS.
- **CI/CD and DevOps:** GitHub Actions, Git, version control, peer code reviews, multi environment testing across DEV, QA, UAT and Production.
- **Database and Validation:** SQL across Microsoft SQL Server, Oracle and PostgreSQL. Complex queries, stored procedures, data migration and test data management.
- **Tools and Process:** Jira, Azure DevOps, Agile and Scrum, sprint planning, defect tracking, root cause analysis, test reporting and dashboards.

FEATURED PROJECT

BugLens — AI Powered Error Analysis Platform | Python · FastAPI · Next.js · Claude API · OAuth 2.0 · PostgreSQL | github.com/Dev0071/buglens-v2

- Built a production AI platform in Python and FastAPI that ingests error events from Sentry, uses the Claude API to identify root cause and severity, then routes notifications and Jira tickets to Slack and Microsoft Teams through webhook integrations.
- Designed a one click OAuth 2.0 setup connecting Sentry, Slack, Teams and Jira with no manual configuration needed from end users. The frontend is built in Next.js with TypeScript.
- Runs in a CI/CD pipeline through GitHub Actions with all integration endpoints tested in Postman and full audit logging in PostgreSQL so every AI decision is traceable.

PROFESSIONAL EXPERIENCE

QA Lead and Scrum Master | Griffin Global Technologies

May 2024 – August 2025

- Led a team of 2 QA engineers and 5 developers as QA Lead and Scrum Master. Owned the test strategy, set quality standards and drove continuous improvement across the full development cycle for Howard Capital Management financial applications.
- Built and maintained Playwright and Cypress automation frameworks in JavaScript and Python. Test coverage grew from 45% to 78% of production workflows and release validation time came down by around 35% over six months.
- Handled all API testing through Postman across REST endpoints, covering authentication flows, status codes and error handling. Wrote SQL queries and stored procedures against SQL Server to validate backend data and manage test datasets.
- Performed exploratory testing alongside scripted regression to surface edge cases and workflow gaps that automated tests would miss. Supported release readiness by validating critical user journeys in staging before every production deployment.
- Investigated failures to determine whether issues were application defects, test problems or environment related. Logged findings in Jira with full reproduction steps, worked with developers on resolution and tracked defect patterns to prevent the same issues returning.
- Ran Agile ceremonies, kept stakeholders informed on quality status and mentored the team on Playwright, Cypress, Postman and SQL testing practices.

QA Engineer | The Jitu

July 2022 – April 2024

- Built Playwright and Cypress test frameworks for PHP web applications. Recurring defects dropped by around 20% through better regression coverage and more consistent testing across functional and UAT phases.
- Wrote Postman API test collections for REST endpoint validation and performed SQL based backend data validation across application data stores to confirm data integrity end to end.
- Maintained automation scripts in version control with proper documentation and coding standards. Participated in Agile ceremonies, reported on quality status and helped new team members get up to speed on the tools and workflows.

EDUCATION AND CERTIFICATIONS

M.S. Computer Science | University of Louisville *Expected 2026*

Certified Scrum Master (CSM) | Playwright | Cypress | Postman | JavaScript | Python | GitHub Actions CI/CD

KEY ACHIEVEMENTS

- ✓ **35% faster release cycles:** brought down release validation time by integrating Playwright and Cypress automation into CI/CD pipelines at Griffin.
- ✓ **30% fewer post release defects:** through consistent automated and API test coverage combined with defect prevention tracking.
- ✓ **Test coverage from 45% to 78%:** grew coverage of production workflows through systematic automation in JavaScript and Python.
- ✓ **BugLens:** a production AI platform built end to end in Python and Next.js. Live on GitHub.
